CheckMate Software Suite Shares Databases

For Immediate Release

Redmond - WA - January 8, 2010 - Dynamic Systems, a Redmond, Washington software developer, specializing in data collection applications has announced a low cost suite of Barcode Tracking applications based on bar code technology.

Launch of Software Suite

DSI has announced the launch of the CheckMate Software Suite, which integrates major functions within an organization by tracking fixed assets, inventory, tools and equipment with common data bases. For example, equipment can be tracked to departments, tasks or employees and shows who has it, where it is located and when is it due back. Capital Assets allows you to control your equipment, furniture, computers - their location, value and condition. Take physical inventory and compare to your current information. The program also helps control asset shrinkage.

The applications are Windows based, integrated, and very easy to use. "I'm impressed with the ease of use and how adaptable your programs are to many environments. It's affordable for many agencies and has a fast return on investment", stated Bill Allen, Process Control Consultant.

Cost Justification

Advantages to the Tracking Program include: reduction of lost equipment, ability to identify bottlenecks, improvement in productivity, reduction of employees frustrations and increased productivity. "Our customers see a typical payback for the software within 3-4 months," states Rob Freeman, V.P. Business Development.

About Dynamic Systems (DSI)

Since 1981, DSI has been a leading provider of barcode tracking solutions that include: documents, capital assets, tools & equipment, inventory, maintenance & service scheduler, time & attendance, and job costing. With this integration, users will be able to use a central data base to perform multiple interrelated tasks and add modules as needed. And sharing data among the applications is almost effortless
