## **Tool & Equipment Tracking for Facility Managers**

**January 16, 2010/Redmond, Washington/** Dynamic Systems, Inc., a Redmond, Washington software developer specializing in data collection applications has announced the release of a low cost equipment manager based on bar code technology.

### **About Dynamic Systems (DSI)**

In business since 1981, DSI provides bar code systems that track tool & equipment, documents, work orders, inventory control, time and attendance and job costing. Bar code data collection has been proven to be the most accurate and efficient method of tracking or counting items.

### **Release of Basic Tool Manager**

DSI has announced the immediate release of "Basic Equipment Manager", targeted for facilities that need to maintain equipment and spare parts inventory. The program also allows reorder points to be set for consumables. Equipment manager can track by location, plant, department, or employee. Managers can monitor all equipment maintenance and schedule preventative maintenance as well as calibrations. Equipment Manager saves time tracking down equipment and assures service is performed on regular intervals.

### **Cost Justification**

If it requires one minute to check a piece of equipment or tool in and out, and if the facility's staff spends even 20 minutes a day searching for tools or servicing equipment, the overhead savings is dramatic. "Loss of tools and malfunctioning equipment is a major overhead cost for organizations. Our customers see a typical payback for the Equipment Manager within 3-4 months," states Alison Falco, President of Dynamic Systems.
