## **Low Cost Public Works Barcode Tracking Software Suite.**

### **For Immediate Release**

Redmond - WA. – February 8, 2011 - Dynamic Systems, a Redmond, Washington software developer, specializing in data collection applications has announced a low cost suite of applications based on bar code technology.

### **Launch of Multi-Software Suite**

DSI has announced the launch of the CheckMate Software for Public Works, Utilities, Energy, and Department of Transportation organizations. The Suite integrates major functions within the organization and includes tracking of capital assets, inventory, and tools and equipment. Tools can be checked out to a job or location, department, task or employee and the system will show who has it, where it is located and when is it due back. Stockroom will track inventory in multiple locations and capital assets will record asset location, condition and will depreciate items. The programs are integrated so there is a common database to access.

The applications are Windows based, integrated, and very easy to use. "I'm impressed with the simplicity and adaptability of your suite of programs. It's very affordable to many agencies, even those with just a few employees," stated Bill Allen, Process Control Consultant.

### **Cost Justification**

Advantages to the Tracking Program include: reduced loss of equipment, ability to identify low stock items, vast improvement in productivity reduces costs, compliance with accounting requirement for capital asset tracking. "Our customers see a typical payback for the software within 3-6 months," states Rob Freeman, V.P. Business Development.

### **About Dynamic Systems (DSI)**

In business since 1981, DSI provides bar code tracking systems including, document, work order, capital assets, maintenance scheduler, inventory control, tool & equipment, time and attendance, and job costing
