## **DSI Announces Expansion of Professional Services Department**

**March 26, 2011/Redmond, Washington/** Dynamic Systems, Inc., a Redmond, Washington software developer specializing in data collection applications has announced the expansion of their Professional Services Department.

### **About Dynamic Systems (DSI)**

In business since 1981, DSI provides bar code systems that track equipment, inventory, documents, time sheets, capital assets and equipment due for maintenance or service. DSI has been providing software installation and training for CheckMate and SIMBA for years, and can now offer more assistance to customers from a business process point of view.

### **Professional Services**

The expansion of DSI's Professional Services brings additional capabilities, which include Best Practices Consulting for inventory and tool tracking applications. "It is a waste of time and money to purchase software but have antiquated processes. In just a couple of days we can help companies maximize their investment and increase efficiencies," stated DSI's General Manager, Leif Anderson. See <http://www.a-barcode.com/services/> or [www.a-barcode.com](http://www.a-barcode.com).

DSI also offers wireless network site surveys and installation, middleware integration of CE and Win Mobile handheld terminals with legacy software, and barcode printer configuration and maintenance.

### **CheckMate Systems Improve the Bottom Line**

If it requires one minute checking an item in and out, and if your staff spends even 20 minutes a day searching for items or servicing equipment, the overhead savings is dramatic. "Loss of equipment or inventory and malfunctioning gear can be a major overhead cost for companies. Our customers see a typical payback for CheckMate within 3-4 months," states Alison Falco, President of Dynamic Systems.
