Barcode Capital Asset Tracking Software

April 28, 2009/Redmond, Washington/ Dynamic Systems, Inc., a Redmond, Washington software developer specializing in data collection applications has announced the release of a low cost Asset Tracking Program based on bar code technology.

About Dynamic Systems (DSI)

Checkmate's Suite of software offers a solution to companies who want to track their important assets. The software shares inventory and ID badge databases, allowing easy integration of functions. In business since 1981, DSI provides bar code systems including tool & equipment management, service and maintenance scheduler, document tracking, inventory control, time and attendance, and job costing. Bar code data collection is proven to be the most accurate and efficient method of tracking or counting items.

Release of Asset Manager

CheckMate Capital Assets allows you to control all your equipment, including furniture, vehicles, tools, IT equipment - know location, value and condition. Take physical inventory and compare to your current information. Keep updated records and print reports and automatically depreciate assets.

Cost Justification

Barcode data collection is virtually 100% accurate and fast. It eliminates the time spent recording the information into a computer. It only takes a minute to check an asset out or in, and if the company's staff spends even 20 minutes a day searching for items, the overhead savings is dramatic. "Our customers see a typical payback for the Tool Manager within 3-4 months," states Alison Falco, President of Dynamic Systems.
