## **Stockroom Tracking Software for Fire / Rescue & Emergency Services.**

**Redmond, Washington/ April 4, 2011** / Dynamic Systems, Inc., a Redmond, Washington software developer, specializing in data collection applications has announced the launch of Stockroom for Emergency Services.

### **About Stockroom**

The easy-to-use software keeps track of inventory items by location. The Program can track inventory in the main stockroom as well as on individual ambulances or other emergency vehicles. The software tracks inventory by multiple units of measure (each/ml/sq in) and records lot numbers and expiration dates. Reports provide replenishment information and usage. And you can track gear to the truck, person, and location. Due back dates can be set up as well as maintenance and service schedules on equipment.

### **Release of Multi-Software Suite**

Stockroom is part of a Suite of software products that include Capital Assets, Document Tracking, and Equipment Tracking. Because all programs are integrated, additional modules can be added with the click of a button.

The software is Windows™ based, integrated, and very easy to use. And the software is flexible and easily adjusted to a company's requirements without custom modifications.

### **Cost Justification**

Advantages of the use of barcode include: eliminating errors, improve staff productivity, reduction of employee's frustrations and reduced waste from expired items, comply with controlled substance reporting, and allow for fast, accurate replenishment of vehicles and stockrooms.

To learn more and experience all of the varied applications of The Checkmate Barcode Tracking Systems just visit [www.a-barcode.com](http://www.a-barcode.com), or <http://www.a-barcode.com/solutions/ems-inventory-management/>.
