DSI Announces 5.0 Barcode Equipment & Tool Tracking for Contractors.

FOR IMMEDIATE RELEASE

May 3, 2009 / Redmond, Washington/ Dynamic Systems, Inc., a Redmond, Washington software developer specializing in data collection applications has announced the 5.0 release of tracking programs for contractors based on bar code technology.

About Dynamic Systems (DSI)

In business since 1981, DSI has been providing bar code systems that increase productivity and reduce costs for contractors. These solutions include tracking tools & equipment, inventory, service, maintenance, time and attendance, capital assets, and documents. The 5.0 release keeps track of maintenance due on equipment, trucks, and item's requiring service, such as compressors. Bar code data collection has been proven to be the most accurate and efficient method of tracking or counting tools and equipment.

Release of Basic Tool Manager

DSI has announced the immediate release of "Toolroom", targeted for construction companies who want to reduce the loss of tools and save time tracking down tools & equipment. "It makes scheduling jobs a lot easier and it's affordable for most contractors, even those with just a few employees," stated Bill Allen, Process Consultant to the construction industry.

Cost Justification

If it requires one minute checking a tool out or in, and if your staff spends even 20 minutes a day searching for tools, the overhead savings is dramatic. "Loss and theft" of equipment & tools is a major overhead cost estimated at over \$1 billion a year. Our customers see a typical payback for the Asset Manager within 3-4 months," states Alison Falco, President of Dynamic Systems.
